

Fall 2007

The Work of Rockhill and Associates is tightly bound to the natural milieu and culture of the Kansas region. Rockhill's work is often described as idiosyncratic, as it emerges without direct imitation of past styles or traditional approaches. The firm challenges conventional practice and builds everything it designs. Through the act of building, Rockhill shares the fading pleasure of authentic materials and substantial construction. Art unconsciously blossoms from the labor of the hand. At its marrow the work grows from a deep history of place, cultural surroundings, and the timeless natural elements of earth, air, light, and water. In the spirit of "critical regionalism," the regions archetypal forms, Spartan aesthetics, frugal methods, and relationship to nature permeate the results.
